PROFESSIONAL SUMMARY

Detail-oriented technical engineering student with a strong foundation in software development, algorithm design, and analytical problem-solving. Proven capability in building structured applications, handling data workflows, and translating functional requirements into robust codebases. Eager to leverage programming expertise and core data analytics skills to design scalable machine learning models and intelligent systems.

CORE TECHNICAL SKILLS

Languages &

Scripting: Python, JavaScript, SQL

Data & ML: Machine Learning Fundamentals, Data Structures & Algorithms, Pandas, NumPy, Scikit-Learn

Databases & Tools: MySQL, Git, REST APIs, Power BI / Tableau

Web & Architecture: React, Node.js, Express.js

EDUCATION

Bachelor of Technology (B.Tech) in [Your Branch/Major]

[Name of University / Institute] | [Expected Graduation Year]

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Statistics & Probability, Software Engineering

KEY PROJECTS

AI-Driven Job Matching Platform

Tech Stack: Python, React, Node.js, MySQL

- Engineered a full-stack platform integrating intelligent matching logic to connect users with relevant employment opportunities based on structured criteria.
- Designed and optimized relational database schemas in MySQL to manage complex user profiles, job listings, and analytical data points efficiently.
- Implemented backend RESTful APIs using Node.js to handle asynchronous data transmission and frontend communication via Axios.

CERTIFICATIONS & CONTINUOUS LEARNING

- Python for Data Science** – [Issuing Platform / Institution]
- SQL and Database Fundamentals** – [Issuing Platform / Institution]
- Machine Learning Basics** – [Issuing Platform / Institution]
- Data Visualization with Power BI / Tableau** – [Issuing Platform / Institution]
